Emulator immo to Mercedes replaces damaged immobilizer or the car key for the group of Mercedes cars.

It function after made changes in memory content of Engine Control Module ECM.

In case of losing the car keys or a car burglary, it enable to drive off from the road to the car sevice.

Due to a low cost, you can leave it in the car instead of buying a new immo or making car keys duplicate.
There is a possibility of using it as the additional security!!

Solder the power supply on emulator from 12V to 5V.

Connecting CAN.

In ECM is Motorola HC11KW1, one need clean from address 22A to 22F on FF and make personalization by tester HHT or Star Diagnosis, because engine must work about 60 seconds to finish coding.

Motorola HC11KW1 quartz 8Mhz – connecting programator X-Prog to motorola:

pin 63	Vss mass	GND
pin 64	Vdd + 5V	Vcc
pin 69	Reset	B
pin 70	Mod B to mass	B4
pin 71	Mod A to mass	GND
pin 72	RXT	B3
pin 73	TXD	

Connect together pin 70 i 71 before making connection by head of cable with wire solder to mass.

After soldering we personalizes by the star diagnosis.

Disconnect CAN from WSP!!!

Warning!!

Due to possible construction changes of the cars, before connecting the device check signals by multimeter on the immobilizer plug or in ECM.
